Installation & Maintenance

Our logo mats should only be installed by a professional in order to ensure the best result.

Seams have to be secured with polyurethane special adhesive for synthetic grass.

Signgrass® logo mats are low in maintenance, just like artificial grass, but not maintenance-free!

- Brush the grass regularly with a stiff broom or rake
- Keep the grass free of debris and leaves
- Remove leaves using a leaf blower or rake
- Remove any weeds immediately to prevent seed dispersal
- Use clean water to rinse off any spills, such as liquids, sauce or melted ice-cream
- Pet excrement or smells can be removed using a shovel or detergent and water
- Avoid contact with hot materials (or close proximity to glass structures) to prevent shrinkage of the grass fibers.

Gas fading

The discolouring of polyethylene is a phenomenon that is well-known in polymer industry. It is also described as yellowing, pinking or gas fading. The colour changes of the material are generally a result of auto-oxidation of phenolic antioxidants in the basic polymer used. These phenolic antioxidants are added to the resin by the producer to protect and stabilize the polymer during processing and use. The change in colour of the polymer is strictly cosmetic and does not affect physical properties.

The sources of discoloration in polyethylene are diverse and can vary from packaging to inappropriate material composition. The most relevant source is excessive levels of atmospheric pollutants like nitrogen oxides (NOx). The relatively high levels of NOx are usually caused by exhaust gasses (gas fading), for example fork lift trucks and heaters in warehouses.

To reverse and remove the discolorations expose the material to UV-light (sunlight).

With respect to synthetic turf fibres, the yellow shine of white yarn will disappear after installation of an outside pitch. When using synthetic turf for an inside application, exposure to sunlight before installation will remove the yellow shine.
